## HOISTING CABLE

**- Equipment for easier handling during montage and demontage of rolls- and doctors located below the drying section.**

The hoisting cable was created as a direct result of our personnel's many years of experience. They discovered that they during montage and demontage needed an easy and efficient way to handle handle rolls and doctors located below the drying section.

The hoisting cable is by its design gentle to sensitive mantle surfaces that are polished and coated with various types of rubber and plastic materials.

The hoisting cable can be ordered for various diameters and has a maximum load of 3000 kg per rope. Each cable comes with complete documentation including test reports from test lifting, issued by Inspecta.
